

Kemin Launches Dry Cellulase ZyloCell™ to Support Biofuels Industries' Low-carbon Initiatives

Converting corn kernel fiber to cellulosic ethanol delivers sustainable alternative fuel source

DES MOINES, Iowa, March 25, 2021 /PRNewswire/ -- Kemin Biofuels, part of Kemin Industries, a global ingredient manufacturer that strives to sustainably transform the quality of life every day for 80 percent of the world with its products and services, has expanded its enzyme portfolio with ZyloCell™, a unique dry cellulase for use in bioethanol plants that breaks down cellulose in corn kernel fiber for a low-carbon fuel source. ZyloCell is a cost-effective alternative to liquid enzyme formulation.

In addition to increased bioethanol production, ZyloCell provides bioethanol producers the following benefits:

- 12-month stability for longer shelf life without refrigeration
- Concentrated for less storage space
- Dry powder for easier handling and accurate dosing

Cellulosic ethanol is an economically, socially and environmentally sustainable solution to reduce carbon emissions in the transportation sector.¹

"The biofuels ingredients align with Kemin's focus on sustainably transforming the quality of life by protecting the future of our planet. We are excited to offer this bioethanol solution to the industry," said Penny Woods, Marketing Director, Kemin Biofuels.

"Cellulosic ethanol presents not only a financial opportunity for ethanol producers – the lower carbon fuel may result in a price premium under the California Low Carbon Fuel Standard (LCFS) and the federal **Renewable Fuel Standard** – but it also provides biofuels producers a low-carbon fuel alternative," said John Phillips, Business Manager, Kemin Biofuels.

Kemin uses its technical expertise, extensive testing and industry knowledge to provide biofuels producers with a portfolio of enzymes designed to improve yeast nutrition, lower operating costs and increase plant efficiency, as well as antioxidants to improve biodiesel stability. With Kemin's tailored Customer Laboratory Services, Kemin Biofuels can identify the most efficient application rate of its products for customers.
