Kemin Animal Nutrition and Health EMENA launch LYSOFORTE® ENFUSIO in EMENA at EuroTier 2026

Self-regulating matrix concept supports total nutrient absorption, giving poultry and pig nutritionists the flexibility to formulate leaner diets with confidence

HANOVER, Germany, Nov. 10, 2026 /PRNewswire/ -- Kemin Industries, a global ingredient manufacturer that strives to sustainably transform the quality of life every day for 80 percent of the world with its products and services, today launched LYSOFORTE® ENFUSIO at EuroTier 2026, the world's leading trade fair for livestock production.

LYSOFORTE ENFUSIO is the newest addition to Kemin's LYSOFORTE portfolio of nutrient absorption technologies for monogastric animal nutrition. As the market moves toward less nutrient-dense diets, lipid digestion and absorption remain important levers for performance, but on their own are no longer enough: ENFUSIO complements and uplifts the lipid contribution through improved amino acid digestion and absorption. Built around LYSOFORTE's self-regulating matrix concept, the technology supports consistent performance across different application strategies, from on-top use to diet reformulation, allowing nutritionists and feed formulators to adjust nutrient specifications with confidence

"LYSOFORTE ENFUSIO reflects where we see the biggest opportunity for our customers today – getting more value out of the nutrients already in the diet, not just adding more," said Dany Morisset, Vice President of Marketing. "As feed costs remain under pressure and diets trend leaner across the region, this is a technology nutritionists can use on top of their current diet or through reformulation, with confidence either way."

The launch is supported by a growing scientific trial program spanning broilers, layers and pigs, and by early customer and field experience in several EMENA markets. Kemin continues to expand this evidence base as ENFUSIO moves from trial to commercial application across the region. The product is available in dry and liquid forms.

"What makes LYSOFORTE ENFUSIO different is the flexibility built into its self-regulating matrix concept," said David Gonzalez Sanchez, Senior Technical Service Manager Monogastric Nutrition. "It works across amino acid digestion and lipid absorption to support more complete nutrient utilization, while allowing nutritionists to choose between on-top application and diet reformulation. That versatility becomes particularly valuable as the industry moves toward leaner, more precisely formulated diets."

Kemin is showcasing LYSOFORTE ENFUSIO at its stand in Hall 22, booth b11 during EuroTier 2026, November 10 – 13, where its technical and commercial teams are available to discuss trial data, matrix values and reformulation support with visitors.
